

Taking Instant Messaging to the Next Level...

With IM Agent Manager you can respond instantly to new business needs, by easily creating IM Agents that delivers critical business services to a wide variety of clients like mobile devices, desktop- and web applications.

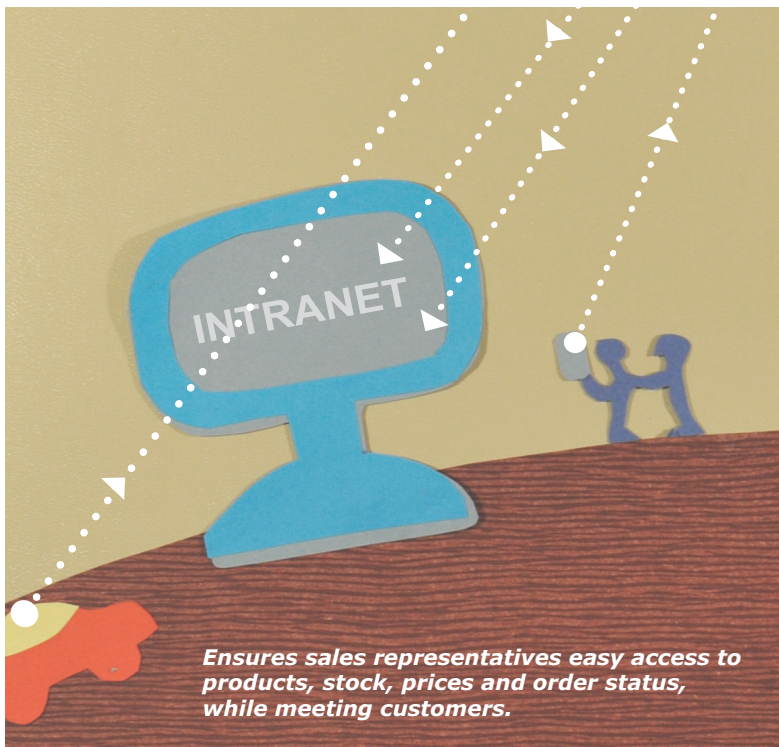

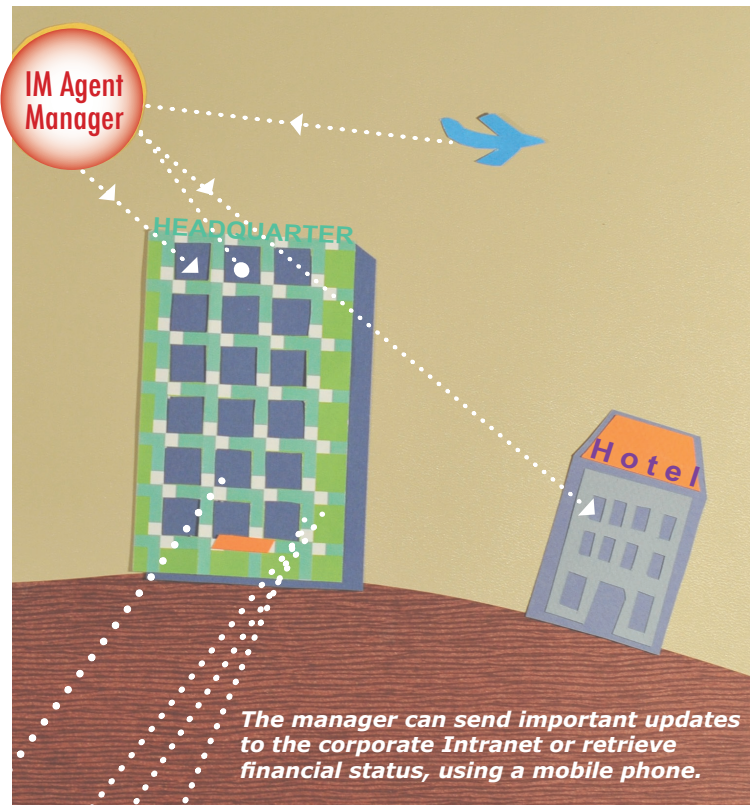

- Enables employees to access data from anywhere
- Easy adjustments to changing business needs
- Dramatical time reduction for users, colleagues and IT-staff
- Minimises education and training costs
- Reuse existing WebServices, servlets, Domino agents etc.
- Reduce development time for the IT-department

"With easier access to business data, our users and IT staff save time, and the ability to deploy new IM agents rapidly makes a significant improvement to our business agility."

Pernille Herold
Lotus Notes Administrator
Niro A/S

Using IM Agent Manager on the go

When accessing your corporate data and applications using IM Agent Manager via Lotus Sametime, the data travels through public networks, through your secure corporate firewall, and through the Lotus Sametime Server and IM Agent Manager, to your internal corporate systems. From your smartphone, you can access critical enterprise applications seamlessly and securely, all through Lotus Sametime and IM Agent Manager.

Technical info:

Gives access to all your data sources:

- JDBC / ODBC (DB2, Oracle, MS SQL, MySQL, Excel)
- Lotus Domino
- XML (servlets, RSS, static XML-files)
- OS-scripts / CLI-applications
- Google (www.google.com or GSA)
- HTTP POST / application servers
- Domino agents

Each IM Agent has its own ACL
